Response Attachment 200-326

The RID Management Team does not agree that the proposed change(s) provide a valid clarification nor satisfy a system specification omission. The requirement states that System Message Viewer is required to provide an audible warning capability. The RID is therefore rejected. Thank you for reviewing the SLS and submitting your RID. Even though we rejected this RID, your input is valuable and we appreciate it.

Additional Information

System Message Viewers only run at an HCI on request by the user at that workstation. The audible queue is local to that workstation. This definition will be presented in product level specifications that are reviewed at CLCS Design Panels. The Redstone version of the System Message Viewer has already been to the Design Panel.
